

TBN ERC-404: Just Another Hype or the Real Deal?

No one can deny that this new token setup is pouring massive fluidity back into the NFT and Eth scene. People were all a buzz about the BRC20 and forgot about Eth. But we all know Eth has always been more dynamic. And now the ERC-404 is in the spotlight. So what's so special about Thug Beast Nation's TBN ERC-404?

The TBN ERC-404 token is rollin' out with some fresh tokenomics, mixin' up the smooth buy and sell game, but also packin' the collectible swag of ERC-721 NFTs.

Basically, you can flip these bad boys at a higher price 'cause these NFTs ain't just for show; they got tokens stuffed inside 'em. That's right, these NFT's are actually crypto currency. So when you snag that NFT, you also snaggin' both the tradability and some slick arbitrage moves with this hybrid NFT off the Arbitrum chain. And TBN ain't just flexin' for a quick minute; it's set to bulldoze through the market both short term and long haul, according to the game plan laid out in our roadmap. We ain't trippin'. We talkin' bullish vibes all day, every day, outpacing the bitches and leavin' 'em suckin' .

For all you crypto hustlers out there, you get the best of both worlds with TBN. You can either flip TBN tokens on the DEX like a Degen, burning that NFT to flames and cash out, or you can sit tight and unlock new doors in the digital asset realm. In the short term, TBN's gearing up to show the crypto world what's up. With our innovative tokenomics, hybrid NFT functionalities, and the seamless integration with platforms like OpenSea, selling books on Amazon, Making Films and Gamify, we're about to light up the scoreboard with gains, gains, gains. This ain't just talk; it's the confidence backed by solid roadmap that's ready, set player one!

What's different about TBN?

Once you mint that beauty into your wallet, it's 100% locked down yours. Ain't just any NFT; it's straight-up cash. You feel me?, The NFT creator doesn't own any part of your NFT. Is that dope or what? 100% ownership? For real? Yes, you're welcome.

Now, for the long haul, the Creator and OG address Astral Assassin LLC ain't on vacation sightseeing at this new fun toy; Nah, we're aiming at global domination. The creator, Astral Assassin is talking about gamify innovation, expanding our ecosystem in the real world book and film verse, and forging DePIN partnerships that'll make TBN the heavyweight champ of the decentralized universe. Our roadmap is packed with milestones that'll not only keep TBN bullish for the long run but also immediately redefine the NFT game.

Aight, let's dive deeper into the tokenomics of Thug Beast Nation (TBN), you ready? So here we are, just chillin' on the Arbitrum blockchain. Peep our site for the address if you need it to locate us around the block, and remember, we roll with the symbol TBN. When we talk about tokenomics in Thug Beast Nation, we spittin' about cash flow and investments - it's all about that supply and demand, feel me?

Breaking it down, tokenomics ain't just a fancy word; it's the lifeblood of TBN pumpamentals. From how we drop and burn NFTs, to relist them at a higher price because, you best believe our art's on another level of dope! The Creator drew this character back in his high school days alongside Mike Shinoda from Linkin Park. It holds personal signifigance, and he's invested in his TBN book launch. You wanna read the Creator's life story, check out Ghost Mind on Amazon! Are you pumped?

First off, TBN Tokenomics cuts out the hassle of needing a direct buyer to flip your NFT - a real pain when you're tryna exit the NFT hustle. Just torch that NFT and swap it out for some sweet Arbitrum or Eth on the Arbitrum Blockchain.

So when we say TBN is bullish in the short term and gonna outrun 'em all in the long term, we're laying down a promise. A promise to keep pushing, keep innovating, and keep delivering value to our community. We're not just playing the game; we're aiming to win it.

So, what's this mean for you, the defi-savvy crypto enthusiast? It means the asset you are buying is not just a digital token or NFT; you're investing in a piece of the Thug Beast Nation community, which has more freedom to move in and out of the market as you please. And It's not just a token; it's an original character only you own, we own no percentage of it. You own it 100%, and when your moves can turn into real-world coin, you feel me? And that's what TBN Tokenomics is all about - making sure you got the flexibility to hustle in the digital streets.

Aight, rollin' into my next point, let's talk about how TBN ERC-404 is changin' the game by lettin' you break down NFTs into bits and pieces, makin' it possible to have shared ownership over these digital gems. This is where it gets slick: you can sell and buy just parts of an NFT, thus limiting the supply of NFT's that can be minted, opening doors to an inflationary asset. This move right here is motivating you to get in early, stay in long, you can own a bunch right now but these low prices won't last long when these pumpamentals get pumping!

One killer move of the TBN ERC-404 is how after a token gets split up, it can be put back together and mint a new NFT. This means you can own a slice of a token instead of having

to cop the whole thing. Picture this: you got one TBN ERC-404 token, you can let go of 0.1 of that token to someone else and keep the 0.9 to yourself. That 0.1 piece just burnt that NFT, and when you buy it back, you got a new NFT. How's that for switching up the NFT game. If you're not happy with your NFT, break him up and re-mint. I can't hear you. That's dope? Yup. That NFT only pops up when you've got a full token or when you merge your pieces to make a new one, the old one is gone forever.

So, here's the breakdown of all the dope tokenomics of our very own TBN ERC-404, keeping it 100 with Thug Beast Nation:

Fresh Tokenomics: Merges the smooth transaction game of ERC-20 tokens with the unique vibe of ERC-721 NFTs, packing tokens inside NFTs for that extra value.

Hybrid NFT Flex: Buy an NFT, and you're also getting into the tradability and potential arbitrage of a hybrid that's both collectible and liquid.

Collector and Trader's Dream: Flip your tokens on the exchange, sparking scarcity by burning the NFT, or hold onto it for new digital asset opportunities.

Complete Ownership: Mint that NFT, and it's all yours, no strings attached. It's not just art; it's your money in digital form.

Fractional Ownership: Break down NFTs into smaller shares, making high-value digital assets more accessible and solving liquidity issues.

Fungible and Non-Fungible: ERC-404 tokens can switch between being fungible and non-fungible, fitting your style and needs.

Unique Burn and Mint Mechanics: Adds an interesting layer to the token dynamics, offering different ways to get in on the game.

Liquidity and Accessibility: Fractionalizing tokens makes trading more fluid, letting you dive into NFTs without breaking the bank. And don't forget, there's money buried in your NFT intrinsically.

Customization and Variety: If you don't like your NFT, sell part of it off and buy part back until it's whole again, then your new Minted NFT is an OG original.

Burn and Mint Your Way: With ERC-404, you have the freedom to destroy or create NFTs, creating scarcity because of the reduced supply.

Before we bounce, we gotta drop one more gem on ya - the crown jewel, if you will. Check this: OpenSea's got love for Arbitrum NFTs. Here's the 411 straight from the streets of Thug Beast Nation.

You can straight up send your NFT over to OpenSea and flip it for double digits, easy. Why? Because it's an original art piece. All you gotta do is copy paste your OpenSea wallet address, send the TBN coins and boom, it's showtime on OpenSea, just like that. If it's playin' hide and seek 'cause of some indexing drama, hit that refresh on the metadata, and bam, it's center stage. That's the quickest and easiest transfer ever, then, you're free to tag it with whatever price tag feels right. It's like laying down a limit order without the suit and tie of an exchange.

Setting a price for TBN is like setting a limit order, flipped NFT style, lettin' you boost your token price like you runnin' the game. 'Cause check it, there's money buried in your NFT intrinsically. TBN's cutting down your risk when you set your NFT price on OpenSea.io, deciding when your order hits the market and finds a buyer ready to match your asking. That's how you push the price north, sparking natural inflation, making your digital gold pile up.

So, we just showed you how to "Check yo self before you wreck yo self," turning that digital art into digital gold. TBN ain't just playing the game; we're setting the rules. It's not experimental, it is monumental, and you got the power to control the hustle, from the streets of the blockchain to the high seas of OpenSea. Keep it locked, keep it loaded, and watch your empire grow.

TBN ERC-404 ain't just another token; it's game-changing the future of crypto, be the first to ride the wave, making the digital asset space more dynamic, accessible, and personal. TBN's fresh token blueprint is injecting a whole new level of fluidity and reach into the NFT market. The TBN ERC-404 wave has crashed onto the scene like King Kong, becoming a hot topic among the Thug Beast Nation (TBN) NFT fam. Even with the roadblocks and challenges, the TBN ERC-404 vibe has caught everyone's attention with its slick take on breaking down NFTs into bits and pieces, selling on DEX's, Relisting at higher prices because of the dope art and tradability, and don't forget the easy and super fast nature of transferring NFT's by just sending tokens to wallet addresses, making NFTs more easily accessible at faster and faster speeds; it's also about boosting their liquidity like never seen before. Now, with the power to trade shares of a token on decentralized exchanges, ERC-404 is opening up the floodgates, allowing NFTs

to flow more easily and freely in multiple markets, and that's real pumpamentals!
